You must **wait a minimum of 5 minutes** before cleaning the Thermal Head to avoid severe burn injuries.

Cleaning the Thermal Head

1. Release the Open Lever and open the cover.
2. Remove the ribbon cassette and set it aside.
3. Remove the paper cassette and set it aside.
4. Locate the thermal head in the printer.
5. Using the cleaning pen provided in the cleaning kit, wipe the thermal head in a side to side motion to clean.
5. If there is debris stuck to the thermal head, use the thermal head wipe to dislodge the debris and wipe again using the cleaning pen.
7. Place the paper and ribbon back in the printer.
8. Close the mechanism unit.
9. The printer will reset.

DNP

RX-1 printer cleaning kit

The DNP Printer Cleaning Kit for the RX series printers provides you with the materials necessary to properly maintain your printer for approximately 4 cleaning sessions.

The kit consists of:

- (4) Chempad® pre-saturated wipes
(Flammable) isopropyl alcohol
67-63-0
- (1) Thermal Printer Clean-Penn™
- (1) Thermal Head Wipe

Please see reverse for cleaning instructions.

Pre-Saturated Wipes and Clean-Penn: Isopropyl alcohol is flammable. Contact with the alcohol can cause irritation to the eyes. In case of contact with the eyes, flush with water for at least 15 minutes. Always use isopropyl alcohol with proper levels of ventilation. In case of ingestion, consult a physician immediately.

Reducing Exposure

Where possible, enclose operations and use local exhaust ventilation at the site of chemical release. If local exhaust ventilation or enclosure is not used, respirators should be worn.

Wear protective work clothing.

Wash thoroughly immediately after exposure to Isopropyl Alcohol and at the end of the work shift.

Post hazard and warning information in the work area. In addition, as part of an ongoing education and training effort, communicate all information on the health and safety hazards of Isopropyl Alcohol to potentially exposed workers.
